# 3 Scroll View School for Video 3: Using Scroll Views

By Brian Modakley

Being that this series is about using scroll views, there's no better time to start using them like the present!

## Challenge

To get started with the challenge, open the starter project and you'll see in the xcassets file that it contains one image. This is a very large image that features the Ray Wenderlich podcast team: Mic and Jake.

Your challenge is to put this image in a Scroll View. For the time being, use springs and struts to do this. Later in the series, you'll be using Auto Layout, but it's best not to complicate the basics.

Remember, when using springs and struts, you'll need to see the content size. You can do this in code or you can do this in Interface Builder.

The completed project will contain the solution.

## Need a Hint?

Adding a scroll view isn't all that's needed. When not working with auto layout, you must set the scroll view's content. You can either do this in code or you can do this in interface builder.

To do this in interface builder, you need to set a runtime attribute. See the demo on how to do this.
