Scroll View School for Video 4: Zooming

By Brian Moakley

In the last video, you added a scroll view to a view controller and embedded an image inside of it. To get this to work, you had to set the content size of the scroll view. Believe it or not, you were just getting started.

Challenge

In this challenge, you'll add zooming support to the challenge project. Here are some parameters for the actual zoom:

Minimum Zoom Scale: 0.1Maximum Zoom Scale: 3.0Standard Zoom: 1.0

Uber Challenge

Like the video, provide an aspect ratio to the photo when the app first starts and the when the device is rotated. By aspect ratio, you should make the photo completely appear within the bounds of the device.

Need Help

Remember, to set up zooming, you need to set an object as a delegate of the scroll view and then you must determine what view that you intend to zoom. In this case, the zooming view is the actual photo.

For a complete solution, please see the completed project.
